

Software for digitization projects or digital collection management can get expensive, particularly when you need multiple programs for different purposes (editing, converting, renaming, etc.) and formats (images, documents, video, audio, OCR, etc.). The <u>Digital Initiatives Department</u> is all for low-cost options when it comes to software, especially when that cost is \$0.

When it comes to image editing on a budget, there is nothing better than <u>GIMP</u>. GIMP is an acronym for GNU Image Manipulation Program, and it's a free and open-source image editor.

Virtual Programming

Adaptation is nothing new for libraries. When much of the world essentially shut down in early 2020, libraries needed to find ways to provide services without users entering the physical buildings. One such modification came in the form of virtual programming. Even today, after many of the restrictions have been greatly decreased or altogether lifted, online programming showed itself as a worthwhile contender in providing library services, and reaching a wider scope of patrons!

Advantages of Virtual Programming

Taking programs online has created opportunities to reach extended audiences. For example, in a survey about library programming given to Illinois public librarians, one director determined that attendance for virtual programming was ten times the attendance for in-person, even after COVID-19 mandates started being lifted (Rice, 2022). Various factors can affect this rise. First, online access nearly eliminates transportation and mobility barriers (Fargo, 2018). Second, particularly when programming is recorded, attendance becomes far more flexible; patrons may view the recording when it's convenient for them. Third, technological tools, such as closed captaining, can make it easier to accommodate patrons who might not experience such modifications during face-to-face programming.

Cisco Networking Academy, Skills for All

On July 19, 2022, Gov. Burgum announced an expanded partnership with Cisco Networking Academy skills-to-job program called Skill for All, which will be available for free to all North Dakota citizens. The Cisco Networking Academy Skills for All program provides free, quality, mobile, self-paced, online learning aligned to industry jobs, providing a pathway to a career in technology. There are numerous courses available, with an emphasis on cybersecurity, along with coding, networking essentials, Internet of things, and other technology-focused courses, some with industry badging and certification.

"This statewide program will greatly benefit the people of North Dakota by providing opportunities to acquire best-in-class skills in highly sought after, in-demand and growing professions," Burgum said. "Skills for All provides North Dakota residents from all backgrounds and experiences the opportunity to obtain 21st-century skills and help our state build a strong and competitive workforce."

EduTech, a division of the North Dakota Information Technology Department, already offers Cisco Networking Academy courses free of charge, including to tribal nations. The Skills for All program expanded the number of courses offered from seven to almost 25, and new course modules are continually being added.

For some of our patrons, the library is the only place that patrons can access a computer. As a vital partner in our community's workforce training and development, libraries play an important role across the state to promote these courses to staff and patrons alike.

Visit <u>https://www.edutech.nodak.edu/ndcitizenskillsforall/</u> for more information and a list of courses.

North Dakota Libraries Tidbits

Library director: Stutsman County not providing proper share of funding

Jul. 26-JAMESTOWN - Stutsman County is not providing its proper share of funding to cover the James River Valley Library System's operational costs, and the library system is an estimated \$38,200 in the hole for services currently being provided, according to Joe Rector, library system director.

National Call for Libraries -Summer 2022

We are recruiting 25+ libraries to become hubs for making outdoor games and interactive stories - using your local history, community voices, and neighborhood landmarks. This is a 2022-23 initiative, thanks to an IMLS grant. Why apply today? There is a growing need to engage beyond library walls, including with digital media - as revealed by the COVID pandemic.

Apply to "Stories of Exile" Reading Groups for Public Libraries 2023 | Yiddish Book Center

General Application Information Please complete the online form below. Our online form allows you to save a draft of your application. Click the "save draft" button at the bottom of the page and copy and save the secure link that appears in the green box at the top of the screen.
